

Websites Recommendations

Website Contents

The website for your project should have the following pages

Required pages

- 1) A **Front or main page** – The front page should have the project name and an attention catching image or video related to your project.
- 2) An **About** or **Introduction** section (this could have multiple pages or subsections) that gives the basic information related to your project
- 3) A **Project Description or Project Implementation** section (this could have multiple pages or subsections) that gives detailed information related to the implementation of your project.
- 4) A **Files** or **Documents** section where you post all important documents related to your project.
- 5) A **Contact or Meet the Team** page where you give the contact information for your team

Optional Pages

- 6) Timeline, implementation blog
- 7) List of Components
- 8) other

Webpage Characteristics

Make your webpages “readable”, readability refers to how easily information published in your webpage or to a document can be easily read. Readability does not refer to the document’s reading level – though writing at appropriate reading levels is certainly something to think about as well.

To achieve readability, you should:

- 1) Use font types and sizes that are easy to read.
- 2) Recommended fonts are: Verdana, Arial, Calibri, Tahoma
- 3) Recommended sizes are:
 - a. **Heading 1:** 24 points
 - b. **Heading 2:** 18 points
 - c. **Heading 3:** 14 points
 - d. **Text:** 10 to 12 points
- 4) Use accessible colors
- 5) Colors are often used for emphasis, to attract attention, or enhance the visual representation of shapes, such as states and countries on a map. However, we need to be careful when selecting a background color. Some background colors make it difficult to

recognize or sufficiently distinguish text or color images from each other. Select background colors that makes reading easy, for example.

Excellent Contrast

Common uses for organic solvents are in dry cleaning (e.g. tetrachloroethylene), as paint thinners (e.g. toluene, turpentine), as nail polish removers and glue solvents (acetone, methyl acetate, ethyl acetate), in spot removers (e.g. hexane, petrol ether), in detergents (citrus terpenes) and in perfumes (ethanol).

Poor Contrast

Common uses for organic solvents are in dry cleaning (e.g. tetrachloroethylene), as paint thinners (e.g. toluene, turpentine), as nail polish removers and glue solvents (acetone, methyl acetate, ethyl acetate), in spot removers (e.g. hexane, petrol ether), in detergents (citrus terpenes) and in perfumes (ethanol).

- 6) Use audio/video presentations.
- 7) Audio or Video presentations can present some types of content more effectively than written documents -- for example, pronunciations for a list of vocabulary terms in a new language or software tutorials on a computer screen. Research shows that short videos (up to 7 minutes in length) are an effective strategy to engage audiences.
- 8) Check that your webpage information is equally accessible in different browsers including: Firefox, Google Chrome, Microsoft Edge and Apple Safari.
- 9) Check that your webpage information is equally accessible in different types of devices, including: desktops, laptops, and cellphones.
